```

LVM: Logical Volume Management
```
    ==============================
  1. create 3 partitions
     /dev/sda3   5000M
     /dev/sda4   5000M
     /dev/sda5   5000M
```

useful commands
```
===============
1. fdisk -l
2. fdisk /dev/sda
   m : get help
   p : print all information about
       partition
   n : create new partition
       e : extends
       p : primary partion(1-4)
       l : logical partions
   t : used to change Partition type

       hex_code: 8e, fd
   w : write and quit
   partprobe
   reboot or init 6
2. Creating Pysical volume

    pvcreate /dev/sda5 /dev/sda6 /dev/sda7
    pvdisplay : just for displaying

 3. create groupe volume

    vgcreate /dev/vg0  /dev/sda5 /dev/sda6 /dev/sda7
4. Create Logic volume lv1, lv2

    lvcreate -L 5000m -n /dev/vg0/lv1
    lvcreate -L 5000m -n /dev/vg0/lv2

    // checking file
    e2fsck /dev/vg0/lv1

    //change file system

    mkfs.ext4  /dev/vg0/lv1

    mount /dev/vg0/lv1 /myData     // for justing mounting
    umount /dev/vg0/lv1

    >> Extending  & Reducing
    lvextend -L +2000m /dev/vg0/lv1
